

## **Yoggie Security Systems™ appoints CMS Peripherals as distributor for its Laptop and PC security products**

CMS Peripherals, the UK based Value-Added Distributor (VAD) of Information Storage and Digital Consumer products and solutions, has announced the signing of a partnership agreement with Yoggie Security Systems™. Under the terms of the agreement CMS Peripherals will distribute Yoggie's security appliances to its Retail, Reseller and VAR channels in UK and Ireland.

Yoggie has developed a unique way of providing Laptop and Personal Computer security for corporate, SOHO and home users. The Yoggie Gatekeeper and Pico (measuring just 23x63x16 mm) devices are miniature security appliances that screen internet traffic before it reaches the host computing devices. The new appliances protect laptops and PCs from malicious intrusion, including viruses, trojans, spy ware, worms and other Internet attacks. Yoggie products empower the user with the freedom to connect to the Internet anywhere and enjoy the highest level of protection—the same as corporate level, hardware-based security solutions used by highly guarded security organizations.

These devices, attached to the Laptop/PC via USB, are small computers that run a full suite of thirteen industry standard security software applications on a scaled down version of Linux. Everything that reaches your computing device is therefore sanitized. "The philosophy behind the Yoggie products are that the security applications that protect your PC should not run on the PC you are protecting, but should run outside the PC. An analogy is that the nightclub bouncer needs to be out on the street, not on the dance floor. Malicious attacks don't even make it to the PC," said Joe Fagan, Group Product Marketing Manager with CMS Peripherals.

"Yoggie has had excellent product reviews by test labs across the globe. Their innovative approach and product offering has also received recommendations from the world's security experts. We are delighted with the prospect of delivering significant growth for Yoggie in UK and Ireland" said Frank Salmon, Group MD, CMS Peripherals.

Yoggie products combine best-of-breed enterprise-class software with proprietary patent pending developments to provide a comprehensive security solution for known and unknown threats. These solutions include:

- Anti Virus
- Anti Spam
- Anti Phishing
- Anti Spyware
- Intrusion Detection (IDS)
- Intrusion Prevention (IPS)
- Web and Mail Proxies
- Firewall (stateful inspection)
- Web Filtering
- Parental Content Control
- Adaptive Security Policy™
- Multi-Layer Security Agent™
- Layer-8 Security Engine™
- VPN Client (Pro model only)
- VPN (available in the Pro model)

“We are drawing on CMS Peripherals’ experience and success in the Retail, SOHO and Corporate markets to promote and distribute our products in UK and Ireland. CMS Peripherals has a 20 year pedigree of taking new technologies to these markets and we are confident that they will build a market for us in this territory. They have the expertise, customer reach and logistics that is necessary to make this product successful” said Christophe Korfer, Executive VP Sales, Consumer Market, Yoggie Security Systems™.

### **About Yoggie Security Systems**

Yoggie Security Systems™ was established in 2005 by Shlomo Touboul, former founder and CEO of Finjan Software, and the inventor of Behavior Based Blocking Technology. As a result of countless meetings with IT managers around the world, Mr. Touboul realized they all share a common concern – while security technology has matured to provide robust security, travelling laptops create security holes that jeopardize the security of the entire corporate network. Mr.

Touboul decided to dare the impossible, to try to miniaturize all the security appliances found in the corporate server room into a credit-card size device that can be easily carried and connected to the laptop.

The attempt was successful. After two years of intensive research, the world's first miniature security appliance was created – Yoggie Gatekeeper™. Putting all the security solutions into such a small device requires robust processing power, and indeed the Yoggie Gatekeeper is as strong as a full-blown Pentium III PC (520 Mpbs). But unlike a regular PC, it was designed as a security hardware, with a hardened operating system and physical separation between the unsafe zone (Internet) and the safe zone (connected to the laptop). Yoggie Gatekeeper solves the vulnerabilities of travelling laptops by effectively extending robust corporate security to the travelling workforce. In addition to serving the corporate world, Yoggie Gatekeeper is also suitable to SMBs and home users.

Yoggie also has wide industry recognition: Winner of RSA Innovation Station 2007, Red Herring 100 Europe 2007, is Personal Computer World Recommended, Techworld short listed and winner of the IDSA and Business Week Silver IDEA award.

### **About CMS Peripherals**

Established in 1988, CMS Peripherals is the largest independent distributor of data storage solutions in the United Kingdom and Ireland. By remaining focused largely on storage CMS Peripherals provide their customers with unrivalled expertise in a fast moving and complex market. Real value added service is an essential component of success to date and CMS Peripherals constantly strive not only to meet, but exceed customers' expectations. CMS Peripherals partners with over 60 storage vendors to offer the channel one of the broadest portfolios of storage products and solutions available today. CMS Peripherals' entire proposition centres on the customer, and this ethos forms the foundation of their drive to build mutually successful customer relationships.
