

Internet Security AG appointed as new distributor for Yoggie Security Systems™' portfolio

Internet Security AG has been appointed by Israel-based Yoggie Security Systems™ to distribute its award winning Yoggie™ security range to enterprise and SME customers in Austria, Switzerland and several Balkan countries including Bosnia, Bulgaria, Croatia, Czech Republic, Hungary, Macedonia, Romania, Serbia, Slovakia and Slovenia.

The company, which has offices in Vienna, Linz, Austria, and Zurich, Switzerland, specializes in IT security technologies and offers a comprehensive portfolio from leading security vendors including Yoggie Security Systems™.

Internet AG will distribute the Yoggie Pico Pro™, Yoggie Gatekeeper Pro™, Yoggie Gatekeeper SOHO™ and also the Yoggie Management Server™. The Yoggie™ products are essentially miniature and robust computers, connectable via USB, offering 13 layers of protection and eliminating the need for multiple security applications on an OS that may conflict with each other and reduce computer performance. The Yoggie™ technology presents an alternative to security only software packages and is available as a USB stick (Yoggie Pico™) or a USB device connected by cable (Yoggie Gatekeeper™ and SOHO). The SOHO version protects up to five networked computers.

Paul Karrer, Managing Director, Internet Security AG, commented: "We have worked with many security vendors and recognize that Yoggie's products represent a major step forward for corporate, remote, SOHO and home users. We believe that our resellers will benefit from offering their clients a new technology that extends corporate security policy to a traveling workforce."

Alon Roth, VP Corporate Sales, Yoggie Security Systems™, added: "We chose to work with Internet Security AG due to their strong track record in the security industry, their high quality technical team and the breadth of coverage they can offer us."

The security applications contained on the Yoggie Pico Pro™ are:

- Anti-Virus
- Anti-Spam
- Anti-Phishing
- Anti-Spyware
- Intrusion Detection (IDS)
- Intrusion Prevention (IPS)
- Web and Mail Proxies
- Firewall (Stateful inspection)
- Web Filtering
- Parental Content Control
- Adaptive Security Policy™
- Multi-Layer Security Agent™
- Layer-8 Security Engine™
- VPN Client (Pro model only)

Centralized security for the traveling and remote workforce via the Yoggie Management Server™

The Yoggie Gatekeeper and Pico Pro™ appliances allow IT managers to extend control their traveling workforces by enforcing policy using the Yoggie Management Server™, which monitors and manages the fleet of traveling Yoggie™ devices. Installed in the IT server room, it provides security policy updates, signatures, and rule-base updates, while obtaining local logs and events for complete visibility. Finally, IT Security managers can protect their organizations' mobile and remote platforms in a non-intrusive, yet consistent manner.

The Yoggie Pico Pro™ also offers:

1. A hassle free hardware-based security solution - does not require complicated installation and configuration - just plug into the USB port where it immediately begins cleaning all of the Internet traffic running to and from the computer
2. The elimination of the conflict between the users' desire for freedom and the IT managers' concern for security.

3. Increases laptop/PC performance by offloading 13 security applications onto one piece of dedicated hardware
4. No need to install heavy software products that pop up with confusing messages
5. Internet updates on an hourly basis, without disturbing the user or hampering laptop or PC resources
6. Prevents unprotected or unauthorized Internet access. By removing the Yoggie Pico Pro™ from the computer all network connections are stopped
7. Protection from Web and Mail threats via one simple to use appliance

- END -

About Internet Security AG

Internet Security AG is a leading distributor of IT security and Internet technology solutions, providing Austrian and Swiss channel partners with reliable, supported solutions from world-leading hardware and software manufacturers.

Internet Security AG does not sell direct to the end-user community or possess its own reseller arm. It operates through a network of reseller partners, including VARs, OEMs, systems integrators, ASPs and ISPs, offering them a single point of expertise and assistance as they deliver solutions to improve the efficiency of modern business. Utilising a full 10 years experience in IP-based business solutions, Internet Security AG delivers true value-add by providing a full-service package of technical, sales and marketing support, practical training and efficient logistics.

Internet Security AG is part of the DNS Group which operates across Europe. In addition to the Austria and Switzerland, DNS in Europe markets in Germany, Hungary, UK, Ireland, Switzerland, Denmark, Finland, Norway, Sweden, Czech Republic, Serbia, Slovakia, Slovenia, Croatia, Poland, Romania and Bulgaria.

About Yoggie Security Systems™

Yoggie Security Systems™ was established in 2005 by Shlomo Touboul, former founder and CEO of Finjan Software, and the inventor of Behavior Based Blocking Technology. As a result of countless meetings with IT managers around the world, Mr. Touboul realized they all share a common concern – while security technology has matured to provide robust security, traveling laptops create security holes that jeopardize the security of the entire corporate network. Mr. Touboul decided to dare the impossible, to try to miniaturize all the security appliances found in the corporate server room into a credit-card size device that can be easily carried and connected to the laptop.

The attempt was successful. After two years of intensive research, the world's first miniature security appliance was created – Yoggie Gatekeeper™. Putting all the security solutions into such a small device requires robust processing power, and indeed the Yoggie Gatekeeper is as strong as a full-blown Pentium III PC (520 Mpbs). But unlike a regular PC, it was designed as a security hardware, with a hardened operating system and physical separation between the unsafe zone (Internet) and the safe zone (connected to the laptop). Yoggie Gatekeeper solves the vulnerabilities of traveling laptops by effectively extending robust corporate security to the traveling workforce. In addition to serving the corporate world, Yoggie Gatekeeper is also suitable to SMBs and home users.

Yoggie also has wide industry recognition: Winner of RSA Innovation Station 2007, Red Herring 100 Europe 2007, is Personal Computer World Recommended, Techworld short listed and winner of the IDSA and Business Week Silver IDEA award.
