Yoggie Security Systems™ launches online knowledge base

Users and channel partners encouraged to share support information

20 August, 2007, Beth Halevy, Israel. Yoggie Security Systems™ today announced that it has launched an **online Knowledge Base** system to provide additional technical support and product information for users, distributors and resellers. The Knowledge Base is accessible from the home page (<http://www.yoggie.com>) and also the support section on the Yoggie website (<http://www.yoggie.com/docs>) or via direct link (<http://kb.yoggie.com/>).

The Yoggie Knowledge Base will support Yoggie's award-winning Gatekeeper and Pico personal security appliances – USB-based miniature computers that provide 13 layers of integrated defense for laptop and PC users. The Knowledge Base has an FAQ structure that includes general product and corporate information as well as specific questions and answers generated from technical support calls and emails. The knowledge base has been specifically designed to allow channel partners and users to add and share content.

Shlomo Touboul, Founder and CEO of Yoggie Security Systems said, "We take the question of support very seriously at Yoggie and want to make it as easy as possible for our customers and partners to increase their knowledge of the Yoggie range and to have access to a full range of potential support issues. The Yoggie Knowledge Base represents the latest in our drive to provide the very best in support."

About Yoggie Security Systems™

Yoggie Security Systems™ was established in 2005 by Shlomo Touboul, former founder and CEO of Finjan Software, and the inventor of Behavior Based Blocking Technology. As a result of countless meetings with IT managers around the world, Mr. Touboul realized they all share a common concern – while security technology has matured to provide robust security, traveling laptops create security holes that jeopardize the security of the entire corporate network. Mr. Touboul decided to dare the impossible, to try to miniaturize all the security appliances found in the corporate server room into a credit-card size device that can be easily carried and connected to the laptop.

The attempt was successful. After two years of intensive research, the world's first miniature security appliance was created – Yoggie Gatekeeper™. Putting all the security solutions into such a small device requires robust processing power, and indeed the Yoggie Gatekeeper is as strong as a full-blown Pentium III PC (520 Mpbs). But unlike a regular PC, it was designed as a security hardware, with a hardened operating system and physical separation between the unsafe zone (Internet) and the safe zone (connected to the laptop). Yoggie Gatekeeper solves the vulnerabilities of traveling laptops by effectively extending robust corporate security to the traveling

workforce. In addition to serving the corporate world, Yoggie Gatekeeper is also suitable to SMBs and home users.

Yoggie also has wide industry recognition: Winner of RSA Innovation Station 2007, Red Herring 100 Europe 2007, is Personal Computer World Recommended, Techworld shortlisted and winner of the IDSA and Business Week Silver IDEA award.
