

Trygg Data appointed Norwegian distributor for Yoggie Security Systems™' portfolio

Trygg Data has been appointed by Israel-based Yoggie Security Systems™ to distribute its award winning Yoggie™ security appliances to its enterprise and SME customers in Norway.

The company specializes in IT security technologies and offers a portfolio from 13 different leading security vendors including Yoggie Security Systems™.

Trygg Data will distribute the Yoggie Pico Pro™, Yoggie Gatekeeper Pro™, Yoggie Gatekeeper SOHO™ and also the Yoggie Management Server™. The Yoggie products are essentially miniature and robust computers, connectable via USB, offering 13 layers of protection and eliminating the need for multiple security applications on an OS that may conflict with each other and reduce computer performance. The technology presents an alternative to security only software packages and is available as a USB stick (Yoggie Pico) or a USB device connected by cable (Yoggie Gatekeeper and SOHO). The SOHO version protects up to five networked computers.

Egil Løseth, CEO Trygg Data, commented: "Trygg Data is delighted to partner with Yoggie. We recognise Yoggie's products as a major step forward for both corporate, remote, SOHO and home users. The unique Yoggie™ technology deals effectively with mobile worker and remote security, fits well in our portfolio and presents a great opportunity for us to offer our buyers a product to help them address serious travelling security problems."

Alon Roth, VP Corporate Sales, Yoggie Security Systems™, added: "We chose to work with Trygg Data due to their strong focus on security technology, ability to work with innovative products and excellent track record in the Norwegian market."

The security applications contained on the Yoggie Pico Pro™ are:

- Anti Virus
- Anti Spam
- Anti Phishing
- Anti Spyware
- Intrusion Detection (IDS)
- Intrusion Prevention (IPS)
- Web and Mail Proxies
- Firewall (stateful inspection)
- Web Filtering
- Adaptive Security Policy™
- Multi-Layer Security Agent™
- Layer-8 Security Engine™
- VPN Client

Centralized security for the travelling and remote workforce via the Yoggie Management Server™

The Yoggie Pico Pro™ allows IT managers to extend control over their travelling workforces by enforcing policy using the Yoggie Management Server™, which monitors and manages the fleet of travelling Yoggie Pico Pro™ devices. Installed in the IT server room, it provides security policy updates, signatures, and rule-base updates, while obtaining local logs and events for complete visibility. Finally, IT Security managers can protect their organizations' mobile and remote platforms in a non-intrusive, yet consistent manner.

The Yoggie Pico Pro™ also offers:

1. A hassle free hardware-based security solution - does not require complicated installation and configuration - just plug into the USB port where it immediately begins cleaning all of the Internet traffic running to and from the computer
2. The elimination of the conflict between the users' desire for freedom and the IT managers' concern for security.
3. Increases laptop/PC performance by offloading 13 security applications onto one piece of dedicated hardware

4. No need to install heavy software products that pop up with confusing messages
5. Internet updates on an hourly basis, without disturbing the user or hampering laptop or PC resources
6. Prevents unprotected or unauthorized Internet access. By removing the Yoggie Pico Pro™ from the computer all network connections are stopped
7. Protection from Web and Mail threats via one simple to use appliance

- END -

About Trygg Data

Trygg Data focuses on computer and Internet security and offers high quality products in computer security as well as testing of the security configurations and effectiveness of Internet gateway security installation.

The company was established in 1992 and today distributes many security products in Norway, such as Akonix, Yoggie Security Systems, Aventail, Fortinet, Safeboot, SecureEnvoy, Stillsecure and SurfControl.

Its customers are among Norway's leading companies both in the private and public sectors. Products are delivered through 150 resellers in all parts of Norway.

About Yoggie Security Systems™

Yoggie Security Systems™ was established in 2005 by Shlomo Touboul, former founder and CEO of Finjan Software, and the inventor of Behavior Based Blocking Technology. As a result of countless meetings with IT managers around the world, Mr. Touboul realized they all share a common concern – while security technology has matured to provide robust security, traveling laptops create security holes that jeopardize the security of the entire corporate network. Mr. Touboul decided to dare the impossible, to try to miniaturize all the security appliances found in the corporate server room into a credit-card size device that can be easily carried and connected to the laptop.

The attempt was successful. After two years of intensive research, the world's first miniature security appliance was created – Yoggie Gatekeeper™. Putting all the security solutions into such a small device requires robust processing power, and indeed the Yoggie Gatekeeper is as strong as a full-blown Pentium III PC (520 Mpbs). But unlike a regular PC, it was designed as a security hardware, with a hardened operating system and physical separation between the unsafe zone (Internet) and the safe zone (connected to the laptop). Yoggie Gatekeeper solves the vulnerabilities of traveling laptops by effectively extending robust corporate security to the traveling

workforce. In addition to serving the corporate world, Yoggie Gatekeeper is also suitable to SMBs and home users.

Yoggie also has wide industry recognition: Winner of RSA Innovation Station 2007, Red Herring 100 Europe 2007, is Personal Computer World Recommended, Techworld shortlisted and winner of the IDSA and Business Week Silver IDEA award.
