

Yoggie Gatekeeper™

YOGGIE™

The Laptop Bodyguard

The world's #1 miniature mobile USB security gatekeeper

Yoggie Gatekeeper™ is the world's first miniature security computer that fits in the palm of your hand. Packed with a robust hardened operating system and best-of breed security software, Yoggie Gatekeeper's sole purpose is to protect your laptop. Finally, you can connect to any hotspot while enjoying the same level of security enforced within your corporate network. Just plug and forget – you are completely safe.

The most powerful security solution

Internet hotspots are unsecured networks shared by hundreds of users. In these hazardous environments, your laptop needs a comprehensive and powerful security solution – it's all or nothing. Yoggie Gatekeeper packs over thirteen different security solutions used by highly guarded security organizations, such as the Pentagon and the FBI.

A robust security appliance, with a hardened Linux-based OS, Yoggie Gatekeeper **physically isolates** the laptop from incoming Internet threats, protecting it from unknown attacks by dropping the connection as they are identified. Even in the unlikely event that an attack is successful, it will be the Yoggie Gatekeeper that gets hit, effectively preventing any damage to the laptop.

Benefits

- High security: connects your laptop to any Hotspot with the confidence of a hardware/software Appliance and 13 robust security applications
- High performance: frees the laptop's computing resources (offloading)
- Hassle-free solution: just connect and forget
- Consistent security policy enforcement: IT organizations retain full control and visibility of mobile laptops
- Suitable for Enterprise, SMB/SOHO, and home networks

13 integrated security applications in one USB device

- Adaptive Security Policy™
- Multi-Layer Security Agent™
- Layer-8 Security Engine™
- URL Categorization & Filtering
- Antispam
- Antiphishing
- Antispyware
- Antivirus
- Transparent Email Proxies (POP3; SMTP)
- Transparent Web Proxies (HTTP; FTP)
- Intrusion Detection System / Intrusion Prevention System
- VPN Client
- Stateful Inspection Firewall

Yoggie. The Power To Be Free.

Yoggie Gatekeeper™

Yoggie Gatekeeper™ physically separates security applications from the laptop by placing them on an **external dedicated hardware**.

Combining best-of-breed with ground-breaking proprietary developments

Yoggie Gatekeeper combines best-of-breed enterprise-class software with proprietary patent-pending developments to provide a comprehensive security solution for known and unknown threats.

- Layer-8 Security Engine™ (L-8 SE, Patent-Pending) – protects the laptop from unknown attacks, new viruses, Spyware, worms etc. The L-8 engine does not require virus signatures. It constantly observes the incoming content to detect and block malicious code as it arrives for the first time.
- Multi-Layer Security Agent™ (MLA, patent-pending) - As an orchestra conductor, it coordinates between the different security components to provide early detection of new attacks as they begin their operation.
- Adaptive Security Policy™ (patent pending) - dynamically matches threats with the appropriate security level in real time, keeping the laptop secure under any condition and completely hassle-free.

Controlling the Yoggie Gatekeepers™ in the field

Yoggie Management Server extends the IT manager's ability to manage and enforce security for traveling laptops. Installed in the IT server room, it manages the fleet of traveling Yoggie Gatekeeper devices, providing security policy updates, signatures, and rule-base updates, while obtaining local logs and events for complete visibility. The YMS also provides the organization's IT management with early warning of suspicious behavior through a proprietary technology that calculates the real-time risk level for every Yoggie Gatekeeper™ device.

Yoggie Gatekeeper Features:

- Hardware-based security appliance with hardened Linux OS
- Physical separation between the laptop and the outside world
- System kernel resides on read-only memory section
- Plug and forget and easy to carry
- Automatic updates
- All-in-one corporate grade security software
- Proprietary security software
- Real-time monitoring and comprehensive reports
- Remote management
